ARRANGEMENT OF SECTIONS

Section

1. Title.
2. Interpretation.
3. Application.
4. Energy consumption and facility rating.
5. Minimum energy performance standards for industrial equipment.
6. Energy management policy.
7. Energy audits.
8. Energy efficiency investment plan.
9. Energy efficiency measures.
10. Implementation reports.
11. Energy use returns.
12. Measurement and verification.
13. Energy audit by Authority.
14. Disputes.
15. Licensing of professionals and energy audit firms.
16. Determination of application.
17. Renewal and replacement of licences.
18. Cancellation of licence.
19. Energy service company.
20. Offences.

FIRST SCHEDULE: Facility rating and classification.

SECOND SCHEDULE: MEPS applicable standards.

THIRD SCHEDULE: Guidelines for preparation of an energy management policy.

FOURTH SCHEDULE: Energy management standards for use in Zimbabwe.

FIFTH SCHEDULE: Guidelines for energy audit report.

SIXTH SCHEDULE: Quality assurance declaration form.

SEVENTH SCHEDULE: Guidelines for implementation report.

EIGHTH SCHEDULE: Energy use returns form.

NINTH SCHEDULE: Qualifications and experience for licensing.

TENTH SCHEDULE: Licensing fees.

ELEVENTH SCHEDULE: Application for accreditation of energy services company.

IT is hereby notified that the Minister of Energy and Power Development, after consultation with the Zimbabwe Energy Regulatory Authority, in terms of section 65 of the Electricity Act [*Chapter 13:19*], has made the following regulations:—

Title

1. These regulations may be cited as the Electricity (Energy Management) Regulations, 2026.

Interpretation

2. In these regulations—

"carbon finance" means a mechanism that facilitates the financial reward through carbon credits for the reduction of greenhouse gas emissions by emitters in developing countries;

"designated facility" means a facility with an installed capacity of at least 100kVA of or a maximum demand customer of a distribution licensee;

"energy audit" means an inspection, survey and analysis of energy flows for energy conservation in a building, process, or system to reduce the amount of energy input into the system without negatively affecting the output;

"energy auditor" means a person licensed by the Authority who carries out inspection, survey and analysis of energy flows in a building, process, or system to reduce the amount of energy input into the system without negatively affecting the output, and includes a firm;

"energy conservation" means the practice of reducing or foregoing energy consumption to save resources;

"energy consumption rating" means the classification by the Authority of premises based on the amount of energy consumed;

"energy efficiency measures" means strategies and techniques to optimise energy consumption;

"energy investment plan" means the allocation of resources for the purpose of advancement, capacity growth, and improvement of energy efficiency and conservation measures;

"energy management policy" means a formal statement of intent by the organisation of its overall intentions and direction related to its energy performance;

"energy manager" means a person licensed by the Authority who carries out and optimises the energy performance of a facility, building, or industrial plant;

"energy savings" means the reduction of energy units consumed per unit of production or per square metre;

"energy service company" means a company or business registered with the Authority to provides energy solutions and services including design, implementation and management of projects on energy management, energy efficiency and retrofitting;

"facility" includes factories, industries, mines, farms, commercial buildings, and institutional buildings, plants;

"licensed professional" means a person licensed to carry out energy audits or energy management or measurement and verification activities;

"measurement and verification professional" means a person licensed by the Authority who manages or performs internationally recognised methods of quantifying the energy usage impacts of energy management activities;

"testing centre" means an institution or facility authorised to carry out and validated equipment or machinery for energy performance.

Application

3. These regulations shall apply to all designated facilities.

Energy consumption and facility rating

4. (1) The Authority shall carry out energy consumption and facility ratings for all designated facilities.

(2) Designated facilities referred to in subsection (1) shall be classified as specified in the First Schedule according to their energy consumption, and they shall be recorded in such a manner and form as specified by the Authority.

Minimum energy performance standards for industrial equipment

5. (1) The minimum energy performance standards set out the requirements that must be met or exceeded for all the industrial equipment that is manufactured or imported into Zimbabwe.

(2) No equipment shall be imported, sold, leased or used in Zimbabwe except where—

(a) the energy performance characteristics of the equipment comply with the standards specified in the Second Schedule for that equipment range; and

(b) the importer or manufacturer has presented a certificate of conformity from an authorised testing centre.

(3) The energy performance criteria and testing requirements are set out in national or internationally adopted standards specified in the Second Schedule.

Energy management policy

6. (1) The owner or occupier of the designated facility shall develop an energy management policy for the facility which shall have the minimum requirements as provided in the Third Schedule and in adherence to Zimbabwe Standard (ZWS) ISO 50001 series standard for energy management systems.

(2) The owner or occupier of the designated facility shall file the energy management policy with the Authority for approval before implementation.

(3) The filing shall be done within twelve months of promulgation of these regulations for already existing designated facilities and before electricity connection for new designated facilities.

(4) The owner or occupier of a designated facility must appoint an energy manager who shall be responsible for the implementation of energy management policy, optimising the energy performance, energy efficiency and conservation measures.

(5) Any person who shall be engaged for energy manager activities and role must be licensed by the Authority.

(6) The owner or occupier of a designated facility shall cause the setting up of an Energy Management Committee at the facility, and the committee must have representations from all levels on the organisation's hierarchy.

(7) The owner or occupier of a designated facility must maintain records of information for a minimum period of five years, which shall include—

(a) daily, weekly, monthly and annual electricity, fuel and water consumption;

(b) daily, weekly, monthly production data or occupancy levels; and

(c) an up-to-date facility plans, infrastructure plans and floor area drawings.

Energy audits

7. (1) The owner or occupier of a designated facility shall cause an energy audit of the facility to be undertaken by an energy auditor at least once every three years.

(2) The energy audits referred to in subsection (1) shall be carried out in a manner specified by the ZWS ISO 50002 standards set out in the Fourth Schedule.

(3) The report of the audit undertaken in terms of subsection (1) shall be in the form set out in the Fifth Schedule.

(4) The Authority may subject the energy audit process to verification after giving not less than fourteen days' notice to the facility owner or occupier.

(5) The owner or occupier shall submit the audit report of the audit to the Authority in a manner approved by the Authority, within thirty days of completion of the audit.

(6) An energy auditor shall, upon completion of an audit, execute a quality assurance declaration in the form set out in the Sixth Schedule.

(7) The Authority shall examine the report submitted in terms of subsection (5) for approval and monitor the implementation of energy efficiency measures.

(8) Where the audit is not satisfactory, the Authority shall cause the audit to be conducted again under supervision.

Energy efficiency investment plan

8. (1) An owner or occupier of designated facilities shall within three months of the energy audit prepare and submit to the Authority an energy efficiency investment plan for the next three years, setting out proposals for the energy efficiency and conservation measures identified on the energy audit.

(2) An energy efficiency investment plan referred to in subsection (1) shall be reviewed by the Authority and may be considered for funding under the revolving energy savings fund.

Energy efficiency measures

9. (1) The owner or occupier of a designated facility shall take measures to realise at least fifty *per centum* of the identified and recommended energy savings opportunities in the energy audit report and specified in the energy efficiency investment plan within three years of the energy efficiency investment plan.

(2) An owner or occupier of a designated facility may consider the inclusion of the relevant components of an energy efficiency investment plan into a project to be registered under the carbon finance mechanism which may be in place from time to time.

Implementation reports

10. (1) Every designated facility shall submit an annual implementation report in the form specified in the Seventh Schedule within thirty days of year-end in response to energy savings opportunities.

(2) The Authority shall inspect to verify compliance with the implementation report.

Energy use returns

11. Every designated facility shall submit energy use returns within fourteen days of the end of the period quarterly and annually as provided in the Eighth Schedule.

Measurement and verification

12. (1) No person shall carry out or conduct measurement and verification of energy efficiency or energy conservation measures without a valid licence issued in terms of section 15.

(2) The measurement and verification process shall be conducted as set out in the ZWS ISO 50015 as specified in the Fourth Schedule, International Performance Measurement and Verification Protocol and ASHRAE Guideline 14.

(3) The Authority shall set guidelines for the reporting requirements at the end of a measurement and verification period.

(4) The Authority shall cause measurement and verification to be performed for every energy efficiency investment plan to be implemented.

Energy audit by Authority

13. (1) Notwithstanding section 7, the Authority may, after giving not less than fourteen days' notice to the facility owner or occupier, undertake an energy audit at its own cost.

(2) The owner or occupier of the designated facility shall allow the Authority access to the facility for purposes of such audit.

Disputes

14. (1) In the event of a dispute between a designated facility owner or occupier and the energy auditor or the energy service company (ESCO), or the measurement and verification professional, the parties shall first attempt to resolve the dispute themselves.

(2) Where the parties fail to resolve their dispute, one or more or the parties to the dispute may petition the Authority providing relevant documentation concerning—

(a) the issues in dispute; and

(b) the position of each of the parties with respect to these issues; and

(c) the areas of agreement between the parties if any.

(3) The other parties to the dispute shall be afforded an opportunity by the Authority to respond to the petition and to provide any other information which may assist in the resolution of the dispute.

(4) The Authority after holding a hearing on the dispute shall make its determination in the matter.

Licensing of professionals and energy audit firms

15. (1) No person shall carry out an energy audit unless he or she is licensed as an energy auditor by the Authority.

(2) A person shall be qualified to be licensed by the Authority as an energy auditor if the person holds the qualifications set out in the Ninth Schedule.

(3) An organisation shall be licensed as an energy audit or measurement and verification firm—

(a) if it is registered in Zimbabwe; and

(b) if it employs at least one licensed professional.

(4) If a company is registered outside of Zimbabwe, the company shall submit proof of such registration to the Authority and have in its employment at least one licensed energy auditor.

(5) A person wishing to be licensed as an energy auditor or an energy audit firm, a measurement and verification professional or energy managers shall make an application to the Authority in the form set out in the Ninth Schedule.

(6) The Authority may require an applicant to be examined in such a manner as it may determine for purposes of ascertaining his or her ability to undertake, engage in or perform energy management, energy audit or measurement and verification work.

(7) All licences shall be subject to a payment of a fee specified in the Tenth Schedule.

Determination of application

16. (1) The Authority shall examine all applications referred to in section 15, and may—

(a) grant the licence accordingly, either without conditions or subject to such conditions as it may deem fit; or

(b) refuse to grant the licence and give reasons.

(2) A licence shall be valid for three years from the date of issue.

Renewal and replacement of licences

17. (1) An application for renewal of a licence shall be made at least thirty days before the expiry date of the existing licence.

(2) If the Authority is satisfied that the applicant has continuously met the conditions of the current licence, the Authority shall renew the licence.

(3) If the application for the renewal of a licence has been made before the expiry of the licence but has not been dealt with by the Authority when the licence expires, that licence shall remain valid until the application for renewal is finalised, and any renewal in such case shall be deemed to have commenced from the day the licence would have expired before the renewal thereof.

(4) Where, upon application, it is shown to the satisfaction of the Authority that a licence has been lost, destroyed or defaced the Authority may issue a duplicate licence.

(5) The Authority shall maintain a register of all licensed energy auditors, energy audit firms, measurement and verification professionals, energy managers and the register shall be available for inspection by the public free of charge.

(6) All licence renewals shall be subject to a payment of a fee specified in the Tenth Schedule.

Cancellation of licence

18. (1) The Authority may, on its own initiative or upon receiving a complaint from—

(a) any owner or occupier or any industry association considered by the Authority to be sufficiently representative of such industry; or

(b) any other licensee or person involved in the energy audit, or energy management, or measurements and verification, or ESCO;

conduct an inquiry into the operations of any licensee to determine its compliance with these regulations.

(2) In conducting an inquiry in terms of subsection (1), the Authority shall have the same powers, rights and privileges as are conferred upon a commissioner by the Commissions of Inquiry Act

[*Chapter 10:07*], other than the power to order a person to be detained in custody, and sections 9 to 13 and 15 to 19 of that Act shall apply with any such changes as may be necessary in relation to such inquiry.

(3) If, after an inquiry held in terms of subsection (2), the Authority is satisfied that—

(a) the licensee has contravened any provision of these regulations; or

(b) the licensee has failed to comply with any term or condition of its licence; or

(c) the financial position of the licensee is such that it is unable to fully and efficiently discharge the duties and obligations imposed on it by its licence;

the Authority may cancel the licence.

(4) The Authority shall notify the licensee in writing of the date and venue of an inquiry under this section and shall allow the licensee an opportunity to make representations at the inquiry.

Energy service company

19. (1) The Authority shall register ESCOs as set out in the form in the Eleventh Schedule.

(2) The Authority shall come up with guidelines for the registration of ESCOs and the guidelines shall be made public and accessible at any given time.

(3) A register of ESCO's shall be kept by the Authority listing the ESCOs' expertise with regard to energy performance contracting.

Offences

20. Any person who—

(a) carries out an energy audit or measurements and verification or energy management without a valid licence issued by the Authority; or

(b) being the owner or occupier of a designated facility—

(i) fails to submit an audit report to the Authority; or

(ii) denies the Authority or its agent access to the facility for purposes of implementing these regulations;

shall be guilty of an offence and liable to fine not exceeding level 5 or imprisonment for a period not exceeding six months or to both such fine and such imprisonment.

FIRST SCHEDULE (*Section 4(2)*)

FACILITY RATING AND CLASSIFICATION

A	High energy performance	EP > 1.3
B	Energy efficient	1.0 < EP < 1.3
C	National benchmark	Energy performance (EP) = 1.0
D	Not energy efficient	0.5 < EP < 1.0
E	Least energy performance	EP < 0.5

SECOND SCHEDULE (*Section 5(2)*)

PART A

MEPS APPLICABLE STANDARDS

1	Industrial process control valves Part	IEC-60534
2	Rotating electrical machines	IEC 60034
3	Steam turbines	IEC 60045
4	Power capacitors for induction heating installations	IEC 60110
5	Hydraulic turbines, storage pumps and pump-turbines – Model acceptance tests	IEC 60193
6	Safety of machinery – Electrical equipment of machines	IEC 60204
7	AC motor capacitors	IEC 60252
8	Industrial-process measurement and control equipment – Operating conditions	IEC 60654
9	A.C. electric ventilating fans and regulators for household and similar purposes	IEC 60665
10	Industrial electro heating equipment – Test methods for direct arc furnaces	IEC 60676
11	Industrial electro heat equipment – Test methods for electroslag remelting furnaces	IEC 60779

PART B

INDUSTRIAL EQUIPMENT COVERED UNDER MEPS

(a) air conditioners or heat pumps (non-ducted; ducted; and multiple split systems);

(b) commercial chillers;

(c) distribution transformers (oil filled and dry type);

(d) three-phase electric motors;

(e) compressed air systems;

(f) steam boilers or steam systems or water heaters;

(g) fans and blowers;

(h) pumps;

(i) industrial stove and oven.

THIRD SCHEDULE (*Section 6(1)*)

GUIDELINES FOR PREPARATION OF AN ENERGY MANAGEMENT POLICY

1. An Energy Management Policy shall include—

(a) a commitment to improve energy efficiency or savings and energy conservation;

(b) a commitment to comply with these regulations;

(c) a commitment to provide resources necessary to achieve energy efficiency or savings and conservation;

(d) a commitment to establish and implement a strategic plan for energy efficiency or savings and conservation;

(e) a commitment to train staff to ensure competence in energy efficiency, savings and conservation;

2. Endorsement of the policy by the head and senior leadership of the organisation.

3. Communication process of the policy to the internal and external stakeholder.

FOURTH SCHEDULE (*Sections 7(2) and 12(2)*)

ENERGY MANAGEMENT STANDARDS FOR USE IN ZIMBABWE

1. ZWS ISO 50001: ENERGY MANAGEMENT SYSTEMS:

This ISO standard provides a practical way to improve energy use, through the development of an energy management system (EnMS).

2. ZWS ISO 50002:2014 ENERGY AUDITS – REQUIREMENTS WITH GUIDANCE FOR USE: Specifies requirements for carrying out an energy audit in relation to energy performance. Applicable to all types of establishments and organizations and all forms of energy and energy use.

3. ZWS ISO 50003:2014 ENERGY MANAGEMENT SYSTEMS – REQUIREMENTS FOR BODIES PROVIDING AUDIT AND CERTIFICATION OF ENERGY MANAGEMENT SYSTEMS: Specifies requirements for competency, consistency and impartiality in the auditing and certification of EMS for bodies providing these services. It addresses the auditing process, competence requirements for personnel involved in the certification process for EMS the duration of audits and multi-site sampling.

4. ZWS ISO 50004:2014 ENERGY MANAGEMENT SYSTEMS – GUIDANCE FOR THE IMPLEMENTATION, MAINTENANCE AND IMPROVEMENT: The standard provides practical guidance and examples for establishing, implementing, maintaining and improving EMS in accordance with the systematic approach of ISO 50001.

5. ZWS ISO 50006:2023 Energy management systems — Evaluating energy performance using energy performance indicators and energy baselines.

6. ZWS ISO 50007:2017 Energy services — Guidelines for the assessment and improvement of the energy service to users.

7. ZWS ISO 50015:2014 ENERGY MANAGEMENT SYSTEMS – MEASUREMENT AND VERIFICATION OF ENERGY PERFORMANCE OF ORGANISATIONS: The standard establishes general principles and guidelines for the process of measurement and verification (M&V) of energy performance of an organisation or its components.

8. ZWS ISO/TS 50044:2019 Energy saving projects (EnSPs) — Guidelines for economic and financial evaluation.

9. ZWS ISO 50046:2019 General methods for predicting energy savings.

10. ZWS ISO 50049:2020 Calculation methods for energy efficiency and energy consumption variations at country, region and city levels.

FIFTH SCHEDULE (*Section 7(3)*)

GUIDELINES FOR ENERGY AUDIT REPORT

1. Cover Page:
   (a) report title;
   (b) name of client (company for which the facility has been audited);
   (c) location of facility;
   (d) date of report;
   (e) audit team and their qualifications;
   (f) signature of auditor or audit firm;
   (g) statement by the company accepting the report and verifying that the audit report has taken into account the company's financial criteria for funding of projects;
   (h) signature of company's representative.

2. Executive Summary:

All information in the Executive Summary should be drawn from the detailed information in the full report. The Executive Summary should contain a brief description of the audit, including:

   (a) name of client, location of facility or building audited;
   (b) objectives of audit;
   (c) key systems and equipment analysed;
   (d) dates of audit;

(e) summary of recommended energy conservation measures, annual energy savings and cost savings using the table format below:

No.	*Recommended Measure*	*Estimated Implementation Cost*	*Estimated annual energy savings (kWh/ unit of production and/or kWh/square foot)*	*Estimated Annual Monetary Savings*	*Estimated annual CO2 reduction (kg/kWh)*	*Payback period*	*Return on Investment (ROI)*
1							
2							
Total							

3. Introduction:

(a) objectives of audit;

(b) the financial criteria and technical or operational limitations;

(c) brief description of facility audited;

(d) previous year's energy consumption and costs, including tariff rates used for financial calculations;

(e) breakdown of energy supply and end use (electricity and fuel);

(f) scope of audit.

4. Methodology

(a) list of instruments used and measurement procedure;

(b) pictures and maps showing the locations of the instruments and sensors in use during the audit;

(c) measurement error analysis (mandatory).

5. Assumptions

Clearly state all the assumptions made in taking measurements, calculations, and financial and economic analysis.

6. Data Analysis and Findings

(a) description of systems or equipment audited, their capacities and ratings, design and operating conditions;

(b) inventory of key energy-consuming equipment and systems;

(c) review of energy, production and service level data for the baseline period (at least one year);

(d) establishment of baseline energy consumption data such as the energy efficiency index (EEI – kWh/m2/year) of buildings, defined as the amount of energy consumed annually per Gross Floor Area (GFA) of the building;

(e) heat and mass balance where applicable;

(f) findings and observations.

7. Identified energy saving measures

(a) brief description of the present situation and shortcomings identified.

(b) recommended energy saving measures with detailed and clear calculations of the predicted annual energy and cost savings, investment cost and payback period for each measure. All numbers should be supported by data, and assumptions must be stated.

8. Energy efficiency investment plan

(a) summary of recommendations to include projected annual kWh savings, estimated cost savings, projected investment cost and investment indicators such as payback period, return on investment and internal rate of return (IRR).

(b) show clearly the agreed energy investment plan the organisation intends to take in order to improve efficiency and conserve energy. The Plans should show the time required for completion, and resources to be used, that is, labour, materials, finances and anything else which is relevant for the project.

9. Monitoring and verification

Indicate the monitoring and verification process to be applied.

10. Appendices

(1) Information of significant importance, which cannot be presented as a part of the text report (because of number of pages, quality of presentation, etc.) should be presented in appendices.

(2) The appendices should include:

(a) schematics and layout drawings of facility or building audited;

(b) details of instrumentation used, parameters monitored, and duration of monitoring for each parameter;

(c) Data plots of performance of systems or equipment audited;

(d) Energy efficiency of major equipment compared against industrial benchmarks;

(e) measurement and verification (M&V) plan for monitoring and verifying energy savings for each of the recommendations;

(f) soft copy containing the raw measurement data.

11. General Notes to the Report

(a) documentation – All numbers related to the results should be supported by information showing how they were derived. This includes all energy savings, cost savings, investment and payback information;

(b) all calculations in the report should be checked for mathematical accuracy;

(c) SI units must be used in all parts of the report;

(d) measurement and instrumentation accuracy;

(e) grammar and style – The report should be written in proper prose. The language should be clear, concise and understandable;

(f) all graphs and plots should be properly labelled and show the dates when the readings were taken;

(g) the report should be printed on both sides to save paper;

(h) a soft copy of the report shall be sent to the Authority;

(i) indicate sources of reference which can include but are not limited to the Energy Management Handbook, International Standards and best global practices.

SIXTH SCHEDULE (*Section 7(6)*)

QUALITY ASSURANCE DECLARATION FORM

I/We have conducted an energy audit as set out in the Energy Management Regulations, which comprises the company energy consumption and costs as at …… (Date).

Owner's Responsibility for the Energy Efficiency Investment plan

The Owner/Occupier are responsible for the preparation and fair presentation of this e Energy Investment plan and the requirements of the Energy Management Regulations. This responsibility includes designing, implementing and maintaining internal controls relevant to the preparation and fair presentation of the Energy Investment plan that is free from material misstatement, whether due to fraud or error, selecting and applying appropriate energy audit methodologies; and making audit estimates that are reasonable in the circumstances.

Energy Auditors Responsibility

Our responsibility is to express an opinion on the energy supply and end use based on our audit. We conducted our audit in accordance with International Standards on Energy Auditing. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance whether the energy audit and investment plan are free from material misstatement.

An energy audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the energy and financial statements. The procedures selected depend on our judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, we considered the internal controls relevant to the company's preparation and fair presentation of the Energy investment plan in order to design audit procedures that were appropriate in the circumstances, but not for the purpose of expressing an opinion on the company's internal controls.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the accompanying Energy Investment Plan give a true and fair view of the possible interventions to improve energy efficiency and conservation of the company as at ……, (Date).

Report on Other Legal Requirements

We wish to report to you, based on our audit, that—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit;

(b) in our opinion, proper energy and financial records have been kept by the company, so far as appears from our examination of those records; and

(c) the company's energy supply and end are/are not in agreement with the records.

SEVENTH SCHEDULE (*Section 10(1)*)

GUIDELINES FOR IMPLEMENTATION REPORT

1. Cover Page

(a) report title;

(b) name of client (company for which facility has been audited);

(c) location of facility or building;

(d) date of report;

(e) audit firm;

(f) audit team and their project designations.

2. Executive Summary

All information in the Executive Summary should be drawn from the detailed information in the full report. The Executive Summary should contain a brief description of the following:

(a) name of client, location of facility or building audited;

(b) measures implemented;

(c) summary of energy saving measures, and the measured annual energy and cost savings in table format as shown below—

No.	*Recommended Measure*	*Estimated annual energy savings*	*Estimated annual energy savings*	*Estimated annual cost savings*	*Estimated implementation on cost*	*Payback period*	*Return on Investment (ROI)*	*Carbon Dioxide Reduction on per Kwh*
1								
2								
TOTAL								

3. Measures implemented and cost of implementation

Details of measures implemented:

(a) description of systems or equipment modified, their capacities and ratings, design conditions, equipment schedules, including information such as the type of systems, type of controls, type and number of auxiliary equipment, etc.

(b) milestone chart showing the timeline of implementation;

(c) cost breakdown of each measure in table format, with reference to the payment documents.

4. Measurements and calculations

(a) details of the measurement and verification system adopted to measure and compare actual savings to savings projected in the detailed audit;

(b) formulae and key data used for calculations;

(c) detailed instrumentation plan;

(d) parameters monitored and duration of monitoring of each parameter;

(e) dates of data collection and logging;

(f) performance of systems or equipment;

(g) findings and observations.

5. Savings achieved

(1) Summary of the measures implemented, the predicted and actual annual kWh savings, and the predicted and actual annual cost savings.

(2) Statement by the company on whether or not the implementations meet the company's savings target stated in the Audit report.

6. Appendices

Information of significant importance, which cannot be presented as a part of the text report (because of number of pages, quality of presentation, etc.) shall be presented as appendices as follows—

(a) data plots of performance of systems or equipment improved;

(b) data plots of energy consumed vs. time before and after implementation on the same graph, showing the improvement;

(c) energy efficiency of major equipment compared against benchmarks set during the detailed audit;

(d) current energy bills.

7. General Notes to the Report.

(1) Content – The report should focus on the measures stated in the detailed energy audit report, and with reference to the figures made then.

(2) Documentation – All numbers related to the results should be supported by information showing how they were derived. This includes all energy savings, cost savings, investment cost and payback information.

(3) Mathematical accuracy – All calculations in the report should be checked for mathematical accuracy.

(4) Grammar and style – The report should be written in proper prose. The language should be clear, concise and understandable.

(5) All graphs and plots should be properly labelled and named, highlighting the important points to take note.

NINTH SCHEDULE (*Section 15(2), (5)*)

QUALIFICATIONS AND EXPERIENCE FOR LICENSING

PART A

ENERGY AUDITOR - MINIMUM PROFESSIONAL CERTIFICATION AND EXPERIENCE

1. To be licensed as an energy auditor, an applicant must have a minimum of any one of the following combinations of professional qualifications.

	Professional Certification	*Experience*
1	Certified Energy Auditor	• At least three (3) years' work experience in energy use – Planning, Operations or Maintenance • Direct involvement in at least five (5) energy audits.
2	Energy Auditor	
3	Certified Energy Manager	
4	Energy Manager	

2. The professional certification shall be from a body recognised by the Zimbabwe Energy Regulatory Authority.

3. A person applying for Category B Energy Audit Licence shall have conducted at least five energy audits.

PART B

CATEGORIES OF ENERGY AUDIT LICENCES

1. Category A Energy Auditor

A holder of a Category A Energy Audit Licence shall be authorised to conduct all energy audits, including investment-grade audits. An applicant for a Category A Audit Licence shall be required to have—

(a) met all the requirements in Part A above;

(b) a holder of a Category B Energy Audit Licence; and

(c) conducted at least one (1) investment-grade energy audit.

2. Category B Energy Auditor

A holder of a Category B Energy Audit Licence shall be authorised to conduct an energy audit only limited up to level III. An applicant for a Category B Audit Licence shall be required to have:

(a) met all the requirements in part A above; and

(b) involved in at least five (5) energy audits.

Application form

PART C

APPLICATION FOR LICENCE AS AN ENERGY AUDITOR

Purpose of Application *: New Application. _____ Renewal_____

1. Name: _____
2. Age: _____
3. Nationality: _____
4. Identity Card/Passport Number: _____
5. Designation: _____
6. Category of Audit: A or B (_____)
7. Academic Qualification: _____
   (a) _____
   (b) _____
8. Professional Certification: _____
   (a) _____
   (b) _____
9. Other specific qualification on energy-related subjects (if any)
